PROJECT PROPOSAL

Crowdfunding Platform

Inspired by 'GoFundMe'

2026

UNIVERSITY OF BARISHAL

INTRODUCTION:

The advancement of digital technology has significantly transformed the mechanisms through which individuals seek and provide financial assistance. Crowdfunding has emerged as an innovative online model that enables individuals to raise funds for medical treatment, education, social welfare, and emergency situations through collective community contributions. Inspired by established platforms such as GoFundMe, this project proposes the development of a secure, transparent, and user-oriented crowdfunding web application designed to facilitate efficient and accountable online fundraising.

PROJECT OVERVIEW:

Project Title:

Crowdfunding platform

Project Type:

Web-Based Social Impact Application.

START DATE:

1 February, 2026.

Estimated Completion Date:

28 February, 2026.

PROJECT EXECUTION STEPS:

1. Requirement analysis and feature finalization.
2. UI/UX design and wireframing.

3. Database schema and backend architecture design.
4. Frontend and backend development.
5. Secure payment gateway integration.
6. Campaign verification and admin approval module.
7. Real-time fund tracking and progress visualization.
8. Testing, deployment, and documentation.

SCOPE OF WORK:

- Development of a web-based crowdfunding platform
- Implementation of three user roles: Administrator, Organizer, and Donor.
- Core features including user authentication, campaign management, donation tracking, and secure online payment integration.
- Integration of frontend, backend, and database systems.
- Implementation of basic security measures and system testing.
- Future enhancements such as mobile application and advanced analytics are beyond the current scope.

TECHNOLOGY STACK:

Frontend

- HTML5, CSS3, JavaScript
- React.js
- Tailwind CSS / Bootstrap

Backend

- PHP with Laravel
- API architecture

Database

- MySQL

Authentication & Security

- JWT-based authentication
- Password hashing

Payment Gateway

- SSLCommerz / Stripe (Sandbox for development)/ bKash

Hosting & Deployment

- Vercel (Frontend)
- Laravel Backend deployed on PHP-supported Web Hosting Server.

SOCIAL IMPACT:

The social significance of this project lies in its potential to promote financial inclusion and strengthen community engagement. By offering an accessible digital fundraising platform, individuals who may lack access to formal banking or institutional loans can obtain support from a broader audience. The system encourages collective responsibility and participatory philanthropy, allowing small individual contributions to generate substantial cumulative impact. Furthermore, it can function as an immediate financial support mechanism during emergencies, natural disasters, or unforeseen crises, thereby contributing positively to societal resilience.

MORAL IMPACT:

From an ethical standpoint, the project emphasizes transparency, accountability, and responsible technological implementation. The platform is designed to display fundraising goals, monitor donation progress, and implement administrative verification processes to reduce the risk of

fraudulent activities. Ensuring data security, payment safety, and user privacy has been prioritized throughout development. This reflects a commitment to ethical software engineering practices and reinforces the principle that technological innovation must align with moral responsibility and public trust.

PROJECT TIMELINE:

PHASE	DESCRIPTION	DURATION
Phase 1	Requirement analysis, UI/UX design	**1 Week**
Phase 2	Backend development, database design	**1 Week**
Phase 3	Frontend development, payment integration	**1 Week**
Phase 4	Testing, deployment, documentation	**1 Week**

Project Cost (Estimated – in BDT):

Core Development Cost

COST COMPONENT	ESTIMATED COST (BDT)
Requirement Analysis & UI/UX Design	৳10,000
Frontend Development	৳25,000
Backend Development	৳30,000
Payment Gateway Integration	৳10,000

Testing, Deployment & Documentation	৳10,000

Total Core Project Cost

৳85,000 (Eighty-Five Thousand Taka Only)

OPTIONAL/ANNUAL COST:

OPTIONAL COMPONENT	ESTIMATED COST(BDT)
Domain Name (Annual)	৳1,200
Hosting & Server (Annual)	৳8,000
SSL Certificate (Annual)	৳3,000
Payment Gateway Transaction Fees	Usage-based
Maintenance & Updates (Annual)	৳10,000

> ***These costs are optional and may vary depending on service providers.***

RISK MANAGEMENT:

RISK	IMPACT	MITIGATION STRATEGY
Payment security issues	High	Use trusted gateways and encrypted communication

Fake / unverified campaigns	High	Admin verification and document validation
Data breaches	High	Secure authentication
Timeline constraints	Medium	Modular development and prioritized features
Low user trust initially	Medium	Transparent reporting and verified campaigns

PROJECT ACCEPTANCE:

The acceptance of this project is supported by its technical relevance, practical applicability, and societal value. It demonstrates competencies in full-stack web development, database integration, role-based authentication systems, and secure payment gateway implementation. Moreover, the project addresses a real-world social need by providing a structured and trustworthy digital fundraising solution. Therefore, it is both academically significant and socially impactful, making it a strong candidate for formal approval and evaluation.
